MAPLUS

MAPLUS FLUORINE EXPERTS

From the passion for skiing and the mastery of the fluorine chemistry Maplus, a division specialized in ski wax and technical accessories for ski preparation, was born in 1997. Thanks to the synergies with the industrial chemical research of Maflon SPA, a dynamic and innovative company specialized in the production of high-tech fluorinated products, owned by Mazza Holding of Castelli Calepio (Bg), this industrial company, 100% Italian, in just twenty years, braving more long-lived competitors out, has managed to reach a leading position in high-level competitions.

Since its debut in the cross-country World Championship in Ramsau in 1998, with the novelty of a perfluorinated liquid product, up to the successes of the Pyeongchang Olympics in 2017 and Åre 2019, Maplus has become, with its perfluorinated products, the reference in terms of gliding and durability in the ski and snowboard World Cups.

We can declare with satisfaction that today Maplus waxes are used in competition by all the National Teams and by all the ski companies present in the World Cup!

And yet Maplus does not care only of athletes and their results: the experience gained at the highest level has allowed us to develop a complete line of wax ideal to meet the needs of any skier and snowboarder, from the freeride addicted to the beginner who wants an easy to manage equipment, up to the needs of the professional laboratories for the rentals.

WAXCELERATE... GM

Innovative products crafted with revolutionary components designed to enhance skiing experience.
Not only they perform exceptionally, but also have a minimal environmental impact.
Proud to offer visionary products that meet both of those criteria.

GM BOOST POWDER

	MFF0140 COLD	MFF0141 MED	MFF0142 HOT
Snow conditions:	Any snow, new and transformed, artificial and natural	Any snow, new and transformed, artificial and natural	Moist, polished and/or icy compact and mixed artificial snow
Snow temperature:	- 22°C / - 8°C	-9°C / -2°C	-3°C / 0°C
Air humidity:	50% - 80%	50% - 90%	60% - 100%
Application:	Hot application Δ 160°C	Hot application Δ 160°C	Hot application Δ 160°C

Note: GM BOOST powder are recommended to be overlapped on GM BASE Solid or Gel

HOT APPLICATION WITH WAXING IRON

1. Spread powder wax evenly on the ski base;
2. Melt the wax passing the waxing iron from the tip to the tail at recommended temperature of 160°C; move the iron at a constant speed (nearly 3 cm per second);
3. Wait at least few minutes for the ski wax to harden and the ski base to cool down;
4. If necessary, remove the excess of melted wax with a sharpened plexy scraper with gentle pressure;
5. Free the ski base structure with manual soft brass brush;
6. Brush the ski base with manual or roto hard horsehair brush;
7. Brush the ski base with manual or roto soft nylon brush;
8. Polish the ski base with 12 mm merino wool roller.

GM BOOST LIQUID

	MFF0150 COLD	MFF0151 MED	MFF0152 HOT
Snow conditions:	Any snow, new and transformed, artificial and natural	Any snow, new and transformed, artificial and natural	Moist, polished and/or icy compact and mixed artificial snow
Snow temperature:	- 22°C / - 8°C	-9°C / -2°C	-3°C / 0°C
Air humidity:	50% - 80%	50% - 90%	60% - 100%

Note: GM BOOST liquid must be always overlapped on GM BASE Solid or Gel

COLD APPLICATION WITH MANUAL FELT

1. Drip the ski wax, spread it with a felt pad to cover all the ski base (useful the pad MTO118);
2. Allow the still liquid wax to penetrate into the spreaded area with rubbing and pressing action with the pad and repeat the same procedure on the whole ski base;
3. Wait five minutes for the ski wax to harden;
4. Free the ski & edge side from the hardened wax with a plexy scraper;
5. Brush the ski base with forward and backward movements pressing with a manual hard nylon brush;
6. Brush the ski base with an hard horsehair manual or roto brush;
7. Polish the ski base with a manual or soft nylon roto brush;
8. For a final touch, polish the ski base with 12 mm merino wool roller.

Application:	Hot application Δ 150°C	Hot application Δ 150°C	Hot application Δ 140°C

HOT APPLICATION WITH WAXING IRON

1. Let the wax block drop on 20 cm of the ski base putting it in contact with the waxing iron base at the recommended temperature for each kind of product and melt the wax immediately spreading it with a regular backward and forward movement (from tip to tail);
2. Repeat the same procedure on all the ski base, then carry out a final passage from the tip to the tail (nearly 4/5 cm per second for GM BASE Cold and Med, nearly 3 cm per second for GM BASE Hot);
3. (mix with hardener) If snow conditions should require an harder base, over the GM BASE layer just hardened, place some ARTIC BASE powder (higher will be the snow abrasion, bigger will be the quantity of powder) and carry out a slow passage (nearly 3 cm per second) with the waxing iron at 150°C. melting perfectly the powder inside the solid wax;
4. Free the ski & edge side from the hardened wax with a plexy scraper;
5. Wait at least 15 minutes for the ski wax to harden and the ski base to cool down, then remove the wax in excess with a sharpened plexy scraper with gentle pressure;
6. Free the ski base structure with manual hard steel brush;
7. Brush the ski base with manual or roto hard brass brush;
8. Brush the ski base with manual or roto hard horsehair brush;
9. Polish the ski base with manual or roto soft nylon brush.

GM BASE GEL

	MFF0130 - MFF0136 COLD	MFF0131 - MFF0137 MED	MFF0132 - MFF0138 HOT
Snow conditions:	Any snow, new and transformed, artificial and natural	Any snow, new and transformed, artificial and natural	Moist, polished and/or icy compact and mixed artificial snow

7. Polish the ski base with a manual or soft nylon roto brush;
8. For a final touch, polish the ski base with 12 mm merino wool roller.

PRODUCTS
RACING
BASE PARAFFIN
ARCTIC BASE

CODE: MW1000 - POWDER - 100 gr
CODE: MW0810 - 250 gr
CODE: MW0820 - 1 kg

USE SNOW TEMP: -30°/-10° C
APPLICATION: 160 °C

Powder and solid paraffin for training use and racing. Use for new, fine, abrasive snow with temperature from -30°C to -10°C. In case of very abrasive old icy snow (spring snow and glacier snow), this paraffin can be used over the fluorocarbon waxes FP4 to increase their long lasting. The final result will be a lower hydrophobia. It can also be used as universal hardener to protect the polyethylene base along the steel edges foils in case of natural or artificial very abrasive snow. Use hot application with the waxing iron at 160°C.

MED BASE

CODE: MW0870 - 250 gr
CODE: MW0875 - 1 kg

USE SNOW TEMP: -10°/-5° C
APPLICATION: 130°/140 °C

Solid base paraffin for any type of snow with temperature from -10°C to -5°C. It's an excellent product for the protection of racing ski bases and it can be used as universal training and testing base. Use hot application with the waxing iron at 130°/140°C.

BASE PARAFFIN
SOFT BASE

CODE: MW0871 - 250 gr
CODE: MW0876 - 1 kg

USE SNOW TEMP: -5°/ 0° C
APPLICATION: 120°/130 °C

Solid base paraffin for any type of snow with temperature from -5°C to 0°C. It's an excellent product for the saturation and the protection of racing ski bases and it can be used as universal training and testing base. It has a melting point of 60°C so it's the best product for the hot saturation of polyethylene ski bases with the thermo-box or the thermo-cover. Use hot application with the waxing iron at 120°/130°C.

USE SNOW TEMP: -2°/ 0° C
APPLICATION: 110°/120 °C

Solid base paraffin for any type of snow with temperature from -2°C to 0°C. It's an excellent product for the saturation and the protection of racing ski bases. It has a melting point of 48°C so it's a very good product for the hot saturation of polyethylene ski bases with the thermo-box or the thermo-cover. Use hot application with the waxing iron at 110°/120°C.

ECO- FLUOR WAX*

Respect for norms and the health of human beings and environmental have always been, and will continue to be, our priorities. In order to get our results in research and development of fluorinated products, we respect the most advanced rules in term of sustainable development.

We have nevertheless invested the maximum of our energy and our efforts in finding new solutions and new products.

Now we are able to guarantee, in light of the new regulations, the utmost respect for anti-pollution and environmental protection standards together with the high standards skiwaxes to which our customers have been accustomed to for years.

FLUORINATED
LIQUID POLYMER
HIGH SPEED ACCELERATOR

PRODUCTS

YELLOW FLASH
CODE: MW0662N
SIZE: 50 ml

USE SNOW TEMP: -3° / 0° C
HUMIDITY: 60 / 100%

Fluorinated liquid polymer for racing. Use for wet, water-ice and icy snow from -3° to 0°C with completely transformed snow crystal with medium and big grain. It works great from hard coarse snow to wet snow and in all intermediate conditions while step by step the sun melts the snow. The Yellow Flash is also the best in raining conditions but only if it's raining over completely transformed snow as above mentioned. If it's snowing with new big moist and wet flakes together with raining on new moist and polish snow, Yellow Flash does not work. It needs at least one day of snow transformation then it works greatly. Air humidity from 60% to 100%. Excellent as accelerant and corrector at the start on fluorocarbon powder waxes or on fluorinated paraffins. Recommended cold application with the felt cap-applicator.

HP3 GREEN POWDER
CODE: MW0900N
SIZE: 50 gr

USE SNOW TEMP: -30° / -10° C
HUMIDITY: 50 / 90%
APPLICATION: 160 °C

High fluoro powder paraffin for racing use as final product or as a base before applying fluorocarbon waxes FP4. Use for snow from -30°C to -10°C. Air humidity from 50% to 90%. This paraffin can be used alone as above mentioned or as a hardener for the high fluorinated paraffins HP3 VIOLET and HP3 RED in case of abrasive new or conserved snow or mixed with artificial snow. Use hot application with the waxing iron at 160°C.

POLYESTER & MERINO WOOL ROTO SET CM 20

CODE: MTO087N

Polyester and Merino wool rollers especially recommended for hot or cold application of every FP4 perfluorinated waxes (powder, spray or solid).

Instead of roto-cork and traditional horsehair and nylon brushes, use new rollers of polyester and merino wool as follows:

1. Roll the base surface with the roto-polyester in both directions at a speed between 1000 and 1500 rpm according to the pressure applied. Repeat several times until the complete saturation of the base surface. Wait at least 10 minutes for cooling of the base surface and for the ski wax to harden.

2. Free the base structure with the 5 mm. roto-wool.

3. Polish the base structure with the 12 mm. roto-wool.

For top performances is necessary one set of new rollers for every type of product (cold-med-hot).

PRODUCTS

TOOLS AND ACCESSORIES
MAPLUSTEX FINE

CODE: MTO090RS
LENGHT : 10 cm - DIAMETER 11 cm

Thanks to its abrasive microlamine, it allows to speed up ski sole in really short time – just three passages are recommended – after new structuring with grinding machine. It also rejuvenates ski sole from opacity due to very abrasive or icy snow or after using an overtemperated waxing iron.

PRODUCTS

TOOLS AND ACCESSORIES
MAPLUSTEX EXTRA FINE

CODE: MTO095RS
LENGHT : 10 cm - DIAMETER 11 cm

Thanks to its special fibres, it is recommended for removing microhairs from nordic skis after new structuring or grinding up. It also gives the final touch to the skis speeding up done with Maplustex Fine: three passages after using Maplustex Fine guarantee the best final results. Specially indicated for removing residues of a very hard solid wax, as Maplus Artic Base solid.

HOW TO USE TIPS

- having a larger diameter than normal rotating brushes, they must be used with minimum pressure at a maximum drill speed of 700/800 revolutions per minute (rpm);
- it is preferable to use them before preparing the edges, in order to avoid rounding off the cusps;
- after using Maplustex rollers it is recommended to thoroughly clean the base with a specific liquid cleaner, as Maplus Clean, so to remove any residues.

COMBI FILE MEDIUM - COARSE

CODE: ML0530 - 80 mm

Made of premium steel, this is the only ski file with two different cuts: a coarse cut on one side to provide an high and frank bite, and a medium cut on the other side to provide a fine tune on edge sharpening. Now with the same file it is possible to remove the excess of sidewall material, to sharpen damage edges and to refine edge sharpening with high precision. Its dimensions are adapted to most sharpeners of 80mm in length. With this combination, sharpening it is not only faster but also much more easy: every skis or snowboard will have a precise and powerful bite.
